

1 Overview

In the final project, each team will design and implement a simple AI-assisted web service. The final outcome of the project will be a working website deployed online using Vercel. Before implementation, each team must first define what service they want to build and write a short Product Requirements Document (PRD). This first task is intended to help each team clarify the service idea, target users, core features, and development direction before starting implementation.

2 Task Objective

The objective of Task 1 is to create an initial PRD draft for your final project service. Your team should decide what kind of web service you will build, why it is useful, who will use it, and what features will be implemented.

3 Requirements

Each team must submit a short PRD document. The PRD should include the following items:

- **Team Information:** Team name and names of all team members.
- **Service Name:** A clear and memorable name for your web service.
- **Product Overview:** A short explanation of what your service does.
- **Target Users:** Who will use this service? Describe the expected users clearly.
- **Problem or Need:** What problem, inconvenience, or need does your service address?
- **Core User Scenario:** Describe one simple scenario showing how a user would use your service.
- **Key Features:** List the main features your team plans to implement. At least three features should be described.
- **AI Usage Plan:** Explain how your team plans to use AI tools or AI-generated content in the service or development process.
- **Page Structure:** Describe the planned pages or sections of your website, such as Home, About, Features, Result, Contact, or Dashboard.
- **Development Plan:** Briefly describe what your team will build first and how you will divide the work among team members.

4 Important Note

Your PRD is not only a submission document, but also a working document for your team. Each team is encouraged to share the PRD with all team members and use it as a common reference during the project. You may continue to revise the PRD as your service idea develops. If there are changes in the service concept, target users, features, page structure, or implementation plan, update the document accordingly.
